### Company Introduction:

Biogas production from wastewater streams is one of the answers to the energy and environmental needs of the future. ACTI-Mag™ high surface area Magnesium Hydroxide can increase biogas yields by up to 20%.

ACTI-Mag™ had contact time with the waste water stream. This allowed breakdown of the complex organic chain in the wastewater, including proteins, carbohydrates and lipids which were hydrolysed into smaller units such as amino acids, sugars and long chain fatty acids. These smaller units are more easily digested by the bacteria in an anaerobic system, produce more biogas. Also, ACTI-Mag is a divalent cation giving more dense compact activated sludge this reduces sludge volume index and reduces dewatering time.

### 公司簡介:

廢水流中的沼氣生產是增加未來能源及滿足環保需求的重要一環。ACTI-Mag™ 高表面積氫氧化鎂可將沼氣產量提高多達 20%。

ACTI-Mag™ 與廢水流接觸，分解廢水中的複雜有機鏈，包括蛋白質、碳水化合物和脂質。它們被水解成較小的單元，如氨基酸、糖和長鏈脂肪酸。這些較小的單元在厭氧系統中更容易被細菌消化，產生更多的沼氣。此外，ACTI-Mag™ 作為二價陽離子，可生成更緻密的活性污泥，從而降低污泥體積指數，減少脫水時間。

### Company Introduction:

LA VESTE TREK 100 FORCLAZ is our most eco-designed padded jacket for mountain trekking. Based on a life-cycle analysis (LCA), the Forclaz teams have found that nearly 90% of the CO2 footprint of our padded jackets results from materials and production, especially the dyeing stage that accounts for 40% of the fabric's footprint.

For this jacket, we chose a dope-dyed process; the padding is a polyester wadding made 70% from recycled plastic bottles and the inner lining is made of biton\*. To provide product information to users without the need for an additional label, these characteristics are printed directly onto the product lining. This jacket is not only eco-friendly, it's also selected by Backpacker Magazine's 2018, as a winner of Editor's Choice Award.

\*Biton: composed of a dyed yarn and a non-dyed yarn.

### Company Introduction:

#### AN INVISIBLE REFRACTORY MINERAL

##### ~ as you can see

""Refractory materials"" are not only the foundation of heavy industry, but also closely related to our lives~ Due to the lack of minerals, Taiwan has long relied on the import of refractories for a long time. A large number of imported refractories produce a large number of refractory waste, resulting in an extremely heavy burden on the environment of Taiwan. Through professional ""urban mining"" method, Lee-Link Company makes ""waste sand into gold"", which used to be buried as refractory waste, and recycled into many kinds of high-value refractories: cast sand, castable, refractory plastics, refractory bricks, and insulation bricks...etc.

The ignored but valuable waste has become a ""new refractory mineral"" in Taiwan and the new internal economic cycle of refractory industry has been created. In addition to reducing the dependence on the import of refractories, the environmental pollution arising from the waste will also be reduced at the same time. Ultimately those low-cost and high-valued "green products" will help us to expand the international market, which also build a good international image and increase the export competitiveness of Taiwan. Lee-Link company creates a win-win situation for the foundry industry, the environment, Taiwan government and Lee-Link company!

國王的「薪」「礦」

~ 聰明的你看得見

「耐火材料」不僅僅是所有重工業的基礎，更是與我們的生活息息相關，舉凡食、衣、住、行都離不開它~

台灣為耐火材料缺乏的國家，所需均仰賴進口。大量的進口耐火材料同時產生大量的耐火廢料，對台灣的環境形成極大的負擔。李連公司透過專業的技術，藉由「城市採礦」方式使「廢砂成金」，將原本只能以預拌掩埋處理之耐火廢料，再生成各式高值之鑄料、塑料、耐火磚及保溫磚...等，供應耐火相關產業使用。被忽視卻極具價值的耐火廢棄物成為「國王的薪礦」，為耐火業界建立了內循環的新經濟模式 - 除了減少業界對進口之依賴外，同時降低廢棄物積留台灣所衍生的環保問題，最終將以低成本高單價之「綠能產品」進軍國際耐火成品市場，提升台灣的國際形象及出口競爭力，創造業者、環境、政府及李連四贏的局面！

In order to extend the production chain of the Ai-yu industry, in addition to responding to the government's circular economy policy, also hoping to bring additional economic income and industrial effects to farmers.

#### 公司簡介：

台灣愛玉倚賴愛玉小蜂授粉農藥施灑比例極低，幾近無毒純天然農作物，目前使用方式尚落在初級食品加工，產業附加價值低外，還有每年龐大加工剩餘物的問題。以台灣每年愛玉收成量推估，每年約莫有 600 公噸的加工剩餘物產生。

農委會臺北水保局為有效利用愛玉加工剩餘物，開發使用果殼及果皮為原料配方之兩款愛玉高經濟價值美妝品 - 愛玉去角質霜與愛玉修護精華液，以延伸愛玉產業生產鏈，除了回應政府農業循環經濟政策外，更希望為農民帶來額外的經濟收入與產業效應。

Our original intention is to create recycled furniture. We create the modular furniture, which not only use non-toxic materials, also demolish and maintain easily. By using "right of use asset" as the innovative business model, we make the furniture into multiple-use assets, and rent to different users.

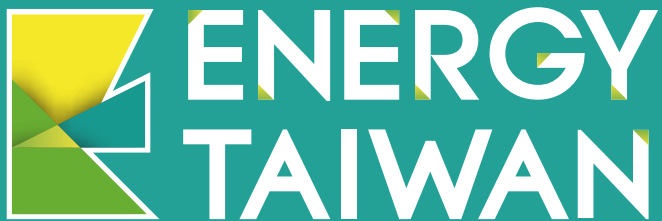

which means the user even if they can't buy it, and still have right of use, just like use service to accompany different families, providing the best choice with the furniture, that makes the furniture no longer be the one-time product, and also achieve true meaning of "cycle".
